Latin framea 2ES 13:9, 2ES 13:28

Description:

The spear was a long, straight rod with a sharp end used for piercing by thrusting. Its circumference was less than the grip of a man's hand, and its length varied from the height of a man to much longer. It was normally made of wood with a metal head or point (see 2.5.1 Spearhead<REALIA:2.5.1>). The butt of the spear was also covered with a pointed piece of metal (see 2SA 2:23) and was used to stick the spear in the ground or to drive oxen or horses as a goad.

See the illustration at 2.3.1 Sheath, scabbard<REALIA:2.3.1>.

Usage:

In battle the spear was held in the middle and thrust at the enemy. Only rarely was it intended for throwing (see 2.6 Javelin<REALIA:2.6>).

Translation:

Where possible, translators should choose a word or phrase that indicates that this weapon was held and thrust (much like a knife on the end of a stick) rather than thrown.

The phrase "lifted up his spear" occurs in 2SA 23:18 and 1CH 11:11. GNT gives the correct meaning with "fought with his spear."

The meaning of the Greek word dexiolabos in ACT 23:23 is uncertain. Most translations have "spearmen" (RSV, NIV), "foot soldiers with spears" (CEV), "men with spears" (NCV), or "light-armed troops" (REB).

Spearhead

2.5.1 Spearhead

References:

Hebrew לֶהָבָה (lehavah) 1SA 17:7

Hebrew קַיִן (qayin) 2SA 21:16

Description and usage:

Bronze spearhead from Iran, Luristan, ca 1000–550 BCE (Los Angeles County Museum of Art www.lacma.org, Public domain, via Wikimedia Commons)The spearhead was a piece of metal, usually iron or bronze, attached to the end of the spear (see 2.5 Spear, lance<REALIA:2.5>). It was either placed over the end of the spear shaft like a sleeve or wedged into a split at the end of the spear shaft and secured by tying it with a cord. The spearhead was sharpened to a point.

Translation:

In both of the references the spearhead is mentioned because of its exceptional size (about 7 kilograms, 15–16 pounds). The spearhead of an average soldier weighed much less. It is possible, but less likely, that the Hebrew word qayin in 2SA 21:16 refers to the entire spear, including its iron head.
